OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

## TMEM38B (NM\_018112) Human Tagged ORF Clone Lentiviral Particle - RC200137L2V

**MW:** 32.5 kDa

**Gene Summary:** This gene encodes an intracellular monovalent cation channel that functions in maintenance

of intracellular calcium release. Mutations in this gene may be associated with autosomal

recessive osteogenesis. [provided by RefSeq, Oct 2012]
