## DNAJB11 (NM\_016306) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

Product Name: DNAJB11 (NM 016306) Human Tagged ORF Clone Lentiviral Particle

Symbol: DNAJB11

Synonyms: ABBP-2; ABBP2; Dj-9; DJ9; EDJ; ERdj3; ERj3; ERj3p; PKD6; PRO1080; UNQ537

**Mammalian Cell** 

Selection:

None

**Vector:** pLenti-C-Myc-DDK (PS100064)

Tag: Myc-DDK
ACCN: NM 016306

ORF Size: 1074 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC200216).

Sequence:

OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 016306.4

 RefSeq Size:
 1698 bp

 RefSeq ORF:
 1077 bp

 Locus ID:
 51726

 UniProt ID:
 Q9UBS4

 Cytogenetics:
 3q27.3

Domains: DnaJ, DnaJ\_C

**Protein Families:** Transmembrane

ORIGENE

**MW:** 40.5 kDa

Gene Summary: This gene encodes a soluble glycoprotein of the endoplasmic reticulum (ER) lumen that

functions as a co-chaperone of binding immunoglobulin protein, a 70 kilodalton heat shock protein chaperone required for the proper folding and assembly of proteins in the ER. The encoded protein contains a highly conserved J domain of about 70 amino acids with a

characteristic His-Pro-Asp (HPD) motif and may regulate the activity of binding

immunoglobulin protein by stimulating ATPase activity. [provided by RefSeq, Mar 2014]
