## Calnexin (CANX) (NM\_001746) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

Product Type: Lentiviral Particles

Product Name: Calnexin (CANX) (NM 001746) Human Tagged ORF Clone Lentiviral Particle

Symbol: CANX

Synonyms: CNX; IP90; P90

Mammalian Cell

Selection:

None

**Vector:** pLenti-C-Myc-DDK (PS100064)

Tag:Myc-DDKACCN:NM\_001746

ORF Size: 1776 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC200229).

Sequence:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through

naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 001746.3

RefSeq Size: 4953 bp RefSeq ORF: 1779 bp

Locus ID: 821

 UniProt ID:
 P27824

 Cytogenetics:
 5q35.3

**Domains:** calreticulin

**Protein Families:** Druggable Genome, Transmembrane

## Calnexin (CANX) (NM\_001746) Human Tagged ORF Clone Lentiviral Particle - RC200229L1V

**Protein Pathways:** Antigen processing and presentation

**MW:** 67.6 kDa

**Gene Summary:** This gene encodes a member of the calnexin family of molecular chaperones. The encoded

protein is a calcium-binding, endoplasmic reticulum (ER)-associated protein that interacts transiently with newly synthesized N-linked glycoproteins, facilitating protein folding and assembly. It may also play a central role in the quality control of protein folding by retaining incorrectly folded protein subunits within the ER for degradation. Alternatively spliced

transcript variants encoding different isoforms have been described. [provided by RefSeq, Jun

2018]
