OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through

naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

## MCAK (KIF2C) (NM\_006845) Human Tagged ORF Clone Lentiviral Particle - RC200254L1V

**MW:** 81.3 kDa

**Gene Summary:** This gene encodes a kinesin-like protein that functions as a microtubule-dependent

molecular motor. The encoded protein can depolymerize microtubules at the plus end, thereby promoting mitotic chromosome segregation. Alternative splicing results in multiple

transcript variants. [provided by RefSeq, Jul 2014]
