TXNL4A (NM_006701) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: TXNL4A (NM_006701) Human Tagged Lenti ORF Clone

Tag: Myc-DDK
Symbol: TXNL4A

Synonyms: BMKS; DIB1; DIM1; SNRNP15; TXNL4; U5-15kD

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC200266).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

st The last codon before the Stop codon of the ORF.

ACCN: NM_006701

ORF Size: 426 bp

TXNL4A (NM_006701) Human Tagged Lenti ORF Clone - RC200266L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 006701.2</u>

RefSeq Size:1415 bpRefSeq ORF:429 bp

Locus ID: 10907 UniProt ID: <u>P83876</u>

Cytogenetics: 18q23

Domains: DIM1

Protein Families: Druggable Genome

Protein Pathways: Spliceosome

MW: 16.8 kDa

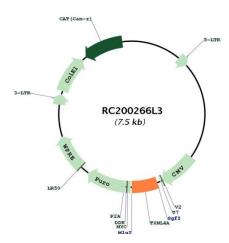

Gene Summary: The protein encoded by this gene is a member of the U5 small ribonucleoprotein particle

(snRNP), and is involved in pre-mRNA splicing. This protein contains a thioredoxin-like fold and it is expected to interact with multiple proteins. Protein-protein interactions have been observed with the polyglutamine tract-binding protein 1 (PQBP1). Mutations in both the coding region and promoter region of this gene have been associated with Burn-McKeown syndrome, which is a rare disorder characterized by craniofacial dysmorphisms, cardiac defects, hearing loss, and bilateral choanal atresia. A pseudogene of this gene is found on chromosome 2. Alternative splicing results in multiple transcript variants. [provided by

RefSeq, Mar 2015]
