OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Method	 Centrifuge at 5,000xg for 5min. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. Close the tube and incubate for 10 minutes at room temperature. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.

SG101 (NM_006292) Human Tagged Lenti ORF Clone – RC200275L1

Gene Summary:The protein encoded by this gene belongs to a group of apparently inactive homologs of
ubiquitin-conjugating enzymes. The gene product contains a coiled-coil domain that interacts
with stathmin, a cytosolic phosphoprotein implicated in tumorigenesis. The protein may play
a role in cell growth and differentiation and act as a negative growth regulator. In vitro
steady-state expression of this tumor susceptibility gene appears to be important for
maintenance of genomic stability and cell cycle regulation. Mutations and alternative splicing
in this gene occur in high frequency in breast cancer and suggest that defects occur during
breast cancer tumorigenesis and/or progression. [provided by RefSeq, Jul 2008]
