	IPP 2 (PPP1R2) (NM_006241) Human Tagged ORF Clone Lentiviral Particle – RC200280L4V
MW:	23 kDa
Gene Summary:	Protein phosphatase-1 (PP1) is one of the main eukaryotic serine/threonine phosphatases. The protein encoded by this gene binds to the catalytic subunit of PP1, strongly inhibiting its activity. Ten related pseudogenes have been found throughout the human genome. Several splice variants encoding different isoforms have been found for this gene. [provided by RefSeq, Oct 2015]
