KBTBD10 (KLHL41) (NM_006063) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: KBTBD10 (KLHL41) (NM 006063) Human Tagged Lenti ORF Clone

Tag: Myc-DDK Symbol: KBTBD10

Synonyms: KBTBD10; Krp1; SARCOSIN

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC200295).

Sequence:

icc.

Sgfl-Mlul

Restriction Sites: Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_006063

ORF Size: 1818 bp

KBTBD10 (KLHL41) (NM_006063) Human Tagged Lenti ORF Clone - RC200295L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 006063.2</u>

 RefSeq Size:
 2472 bp

 RefSeq ORF:
 1821 bp

 Locus ID:
 10324

 UniProt ID:
 060662

 Cytogenetics:
 2q31.1

Domains: Kelch

MW: 68 kDa

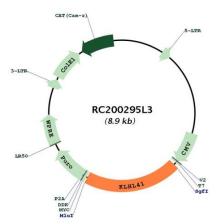

Gene Summary: This gene is a member of the kelch-like family. The encoded protein contains a BACK domain,

a BTB/POZ domain, and 5 Kelch repeats. This protein is thought to function in skeletal muscle development and maintenance. Mutations in this gene have been associated with nemaline

myopathy (NM), a rare congenital muscle disorder. [provided by RefSeq, Mar 2015]
