## HPRT (HPRT1) (NM\_000194) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

**Product Name:** HPRT (HPRT1) (NM\_000194) Human Tagged ORF Clone Lentiviral Particle

Symbol: HPRT1

Synonyms: HGPRT; HPRT

Mammalian Cell

Selection:

None

**Vector:** pLenti-C-Myc-DDK (PS100064)

Tag: Myc-DDK
ACCN: NM 000194

ORF Size: 654 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC200462).

Sequence:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This

clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 000194.1

 RefSeq Size:
 1435 bp

 RefSeq ORF:
 657 bp

 Locus ID:
 3251

 UniProt ID:
 P00492

Cytogenetics: Xq26.2-q26.3

Domains: Pribosyltran

**Protein Families:** Druggable Genome, Stem cell - Pluripotency

## HPRT (HPRT1) (NM\_000194) Human Tagged ORF Clone Lentiviral Particle - RC200462L1V

**Protein Pathways:** Drug metabolism - other enzymes, Metabolic pathways, Purine metabolism

**MW:** 24.6 kDa

**Gene Summary:** The protein encoded by this gene is a transferase, which catalyzes conversion of

hypoxanthine to inosine monophosphate and guanine to guanosine monophosphate via transfer of the 5-phosphoribosyl group from 5-phosphoribosyl 1-pyrophosphate. This enzyme plays a central role in the generation of purine nucleotides through the purine salvage pathway. Mutations in this gene result in Lesch-Nyhan syndrome or gout.[provided

by RefSeq, Jun 2009]
