## CDC25A (NM\_001789) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

**Product Name:** CDC25A (NM\_001789) Human Tagged ORF Clone Lentiviral Particle

Symbol: CDC25A
Synonyms: CDC25A2

Mammalian Cell

Selection:

None

**Vector:** pLenti-C-Myc-DDK (PS100064)

 Tag:
 Myc-DDK

 ACCN:
 NM\_001789

 ORF Size:
 1572 bp

**ORF Nucleotide** 

OTI Disclaimer:

1372 bp

Sequence:

The ORF insert of this clone is exactly the same as(RC200496).

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This

clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 001789.2

 RefSeq Size:
 3717 bp

 RefSeq ORF:
 1575 bp

 Locus ID:
 993

 UniProt ID:
 P30304

Cytogenetics: 3p21.31

Domains: RHOD

**Protein Families:** Druggable Genome, Phosphatase

## CDC25A (NM\_001789) Human Tagged ORF Clone Lentiviral Particle - RC200496L1V

**Protein Pathways:** Cell cycle, Progesterone-mediated oocyte maturation

**MW:** 59.1 kDa

Gene Summary: CDC25A is a member of the CDC25 family of phosphatases. CDC25A is required for

progression from G1 to the S phase of the cell cycle. It activates the cyclin-dependent kinase CDC2 by removing two phosphate groups. CDC25A is specifically degraded in response to DNA damage, which prevents cells with chromosomal abnormalities from progressing through cell division. CDC25A is an oncogene, although its exact role in oncogenesis has not been demonstrated. Two transcript variants encoding different isoforms have been found for

this gene. [provided by RefSeq, Jul 2008]
