CPSF30 (CPSF4) (NM_001081559) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: CPSF30 (CPSF4) (NM_001081559) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: CPSF30

Synonyms: CPSF30; NAR; NEB-1; NEB1

Mammalian Cell None

Selection:

Vector: pLenti-C-mGFP (PS100071) E. coli Selection:

Chloramphenicol (34 ug/mL)

Sequence:

The ORF insert of this clone is exactly the same as(RC200532).

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

ORF Nucleotide

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_001081559

ORF Size: 732 bp

CPSF30 (CPSF4) (NM_001081559) Human Tagged Lenti ORF Clone - RC200532L2

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001081559.1</u>

 RefSeq Size:
 1754 bp

 RefSeq ORF:
 735 bp

 Locus ID:
 10898

 UniProt ID:
 095639

 Cytogenetics:
 7q22.1

MW: 27.5 kDa

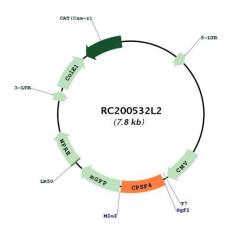

Gene Summary: Inhibition of the nuclear export of poly(A)-containing mRNAs caused by the influenza A virus

NS1 protein requires its effector domain. The NS1 effector domain functionally interacts with the cellular 30 kDa subunit of cleavage and polyadenylation specific factor 4, an essential component of the 3' end processing machinery of cellular pre-mRNAs. In influenza virus-infected cells, the NS1 protein is physically associated with cleavage and polyadenylation specific factor 4, 30kD subunit. Binding of the NS1 protein to the 30 kDa protein in vitro prevents CPSF binding to the RNA substrate and inhibits 3' end cleavage and polyadenylation of host pre-mRNAs. Thus the NS1 protein selectively inhibits the nuclear export of cellular, and not viral, mRNAs. Multiple alternatively spliced transcript variants that encode different

isoforms have been described for this gene. [provided by RefSeq, Jul 2008]
