

Product datasheet for RC200546L1

BIK (NM_001197) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: BIK (NM_001197) Human Tagged Lenti ORF Clone

Tag: Myc-DDK

Symbol: BIK

Synonyms: BIP1; BP4; NBK

Mammalian Cell None

Selection:

Vector:pLenti-C-Myc-DDK (PS100064)E. coli Selection:Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC200546).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

 $[\]ensuremath{^*}$ The last codon before the Stop codon of the ORF.

ACCN: NM_001197

ORF Size: 480 bp

BIK (NM_001197) Human Tagged Lenti ORF Clone - RC200546L1

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001197.3</u>

RefSeq Size: 966 bp
RefSeq ORF: 483 bp
Locus ID: 638

UniProt ID: Q13323
Cytogenetics: 22q13.2

Protein Families: Druggable Genome, Stem cell - Pluripotency, Transmembrane

MW: 18 kDa

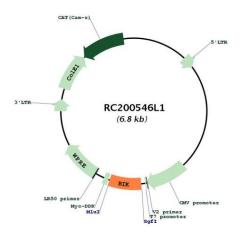

Gene Summary: The protein encoded by this gene shares a critical BH3 domain with other death-promoting

proteins, such as BID, BAK, BAD and BAX, that is required for its pro-apoptotic activity, and for interaction with anti-apoptotic members of the BCL2 family, and viral survival-promoting proteins. Since the activity of this protein is suppressed in the presence of survival-promoting proteins, it is suggested as a likely target for anti-apoptotic proteins. [provided by RefSeq, Sep

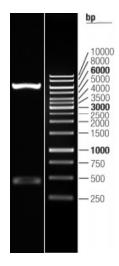

2011]
