Product datasheet for RC200551L4V

PAPSS2 (NM_004670) Human Tagged ORF Clone Lentiviral Particle

Product data:

Due du et True et	
Product Type:	Lentiviral Particles
Product Name:	PAPSS2 (NM_004670) Human Tagged ORF Clone Lentiviral Particle
Symbol:	PAPSS2
Synonyms:	ATPSK2; BCYM4; SK2
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-mGFP-P2A-Puro (PS100093)
Tag:	mGFP
ACCN:	NM_004670
ORF Size:	1842 bp
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC200551).
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
RefSeq:	<u>NM 004670.3</u>
RefSeq Size:	3859 bp
RefSeq ORF:	1845 bp
Locus ID:	9060
UniProt ID:	<u>095340</u>
Cytogenetics:	10q23.2-q23.31
Domains:	ATP-sulfurylase, APS_kinase
Protein Families:	Druggable Genome

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2022 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

	PAPSS2 (NM_004670) Human Tagged ORF Clone Lentiviral Particle – RC200551L4V
Protein Pathway	s: Metabolic pathways, Purine metabolism, Selenoamino acid metabolism, Sulfur metabolism
MW:	69.5 kDa
Gene Summary:	Sulfation is a common modification of endogenous (lipids, proteins, and carbohydrates) and exogenous (xenobiotics and drugs) compounds. In mammals, the sulfate source is 3'- phosphoadenosine 5'-phosphosulfate (PAPS), created from ATP and inorganic sulfate. Two different tissue isoforms encoded by different genes synthesize PAPS. This gene encodes one of the two PAPS synthetases. Defects in this gene cause the Pakistani type of spondyloepimetaphyseal dysplasia. Two alternatively spliced transcript variants that encode different isoforms have been described for this gene. [provided by RefSeq, Jul 2008]
