

Product datasheet for RC200594L4

NMT1 (NM_021079) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: NMT1 (NM_021079) Human Tagged Lenti ORF Clone

Tag: mGFP
Symbol: NMT1
Synonyms: NMT

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC200594).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM_021079

ORF Size: 1488 bp

OriGene Technologies, Inc. 9620 Medical Center Drive, Ste 200

NMT1 (NM_021079) Human Tagged Lenti ORF Clone - RC200594L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 021079.3</u>

RefSeq Size:4903 bpRefSeq ORF:1491 bp

Locus ID: 4836 UniProt ID: <u>P30419</u>

Cytogenetics: 17q21.31

Domains: NMT

Protein Families: Druggable Genome

MW: 56.6 kDa

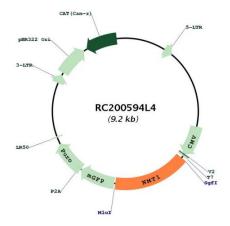

Gene Summary: Myristate, a rare 14-carbon saturated fatty acid, is cotranslationally attached by an amide

linkage to the N-terminal glycine residue of cellular and viral proteins with diverse functions. N-myristoyltransferase (NMT; EC 2.3.1.97) catalyzes the transfer of myristate from CoA to proteins. N-myristoylation appears to be irreversible and is required for full expression of the biologic activities of several N-myristoylated proteins, including the alpha subunit of the signal-transducing guanine nucleotide-binding protein (G protein) GO (GNAO1; MIM 139311)

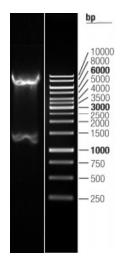

(Duronio et al., 1992 [PubMed 1570339]).[supplied by OMIM, Nov 2008]
