Spermine synthase (SMS) (NM_004595) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Spermine synthase (SMS) (NM_004595) Human Tagged Lenti ORF Clone

Tag: Myc-DDK

Symbol: Spermine synthase

Synonyms: MRSR; SPMSY; SpS; SRS

Mammalian Cell None

Selection:

Vector:pLenti-C-Myc-DDK (PS100064)E. coli Selection:Chloramphenicol (34 ug/mL)

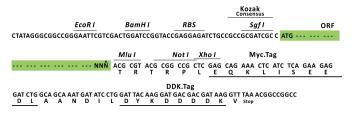

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC200619).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

 $[\]ensuremath{^*}$ The last codon before the Stop codon of the ORF.

ACCN: NM_004595

ORF Size: 1098 bp

Spermine synthase (SMS) (NM_004595) Human Tagged Lenti ORF Clone - RC200619L1

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 004595.2</u>

RefSeq Size: 1868 bp RefSeq ORF: 1101 bp Locus ID: 6611

UniProt ID: P52788

Cytogenetics: Xp22.11

Domains: Spermine synth

Protein Pathways: Arginine and proline metabolism, beta-Alanine metabolism, Cysteine and methionine

metabolism, Glutathione metabolism, Metabolic pathways

MW: 41.3 kDa

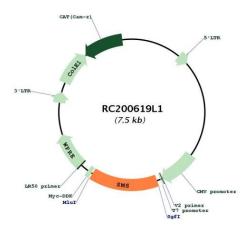

Gene Summary: This gene encodes a protein belonging to the spermidine/spermin synthase family and

catalyzes the production of spermine from spermidine. Pseudogenes of this gene are located on chromosomes 1, 5, 6 and X. Mutations in this gene cause an X-linked intellectual disability called Snyder-Robinson Syndrome (SRS). Multiple transcript variants encoding different

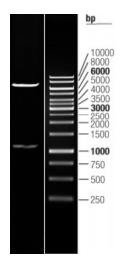

isoforms have been found for this gene. [provided by RefSeq, Jul 2017]
