CD79B (NM_001039933) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: CD79B (NM_001039933) Human Tagged Lenti ORF Clone

Tag: Myc-DDK
Symbol: CD79B

Synonyms: AGM6; B29; IGB

Mammalian Cell None

Selection:

Vector:pLenti-C-Myc-DDK (PS100064)E. coli Selection:Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC200665).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_001039933

ORF Size: 1428 bp

CD79B (NM_001039933) Human Tagged Lenti ORF Clone - RC200665L1

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001039933.1</u>

RefSeq Size: 1303 bp
RefSeq ORF: 693 bp
Locus ID: 974

UniProt ID: P40259
Cytogenetics: 17q23.3

Protein Families: Druggable Genome, Transmembrane

Protein Pathways: B cell receptor signaling pathway

MW: 26.05 kDa

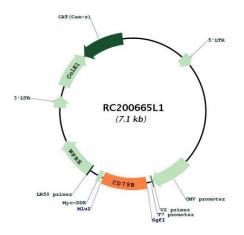

Gene Summary: The B lymphocyte antigen receptor is a multimeric complex that includes the antigen-specific

component, surface immunoglobulin (lg). Surface lg non-covalently associates with two other proteins, lg-alpha and lg-beta, which are necessary for expression and function of the B-cell antigen receptor. This gene encodes the lg-beta protein of the B-cell antigen component. Alternatively spliced transcript variants encoding different isoforms have been described.
