## PFKP (NM\_002627) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

Product Type: Lentiviral Particles

**Product Name:** PFKP (NM\_002627) Human Tagged ORF Clone Lentiviral Particle

Symbol: PFKF

**Synonyms:** ATP-PFK; PFK-C; PFK-P; PFKF

Mammalian Cell

Selection:

Puromycin

**Vector:** pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

**ACCN:** NM\_002627 **ORF Size:** 2352 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC200673).

Sequence:

OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 002627.3

 RefSeq Size:
 2657 bp

 RefSeq ORF:
 2355 bp

 Locus ID:
 5214

 UniProt ID:
 Q01813

 Cytogenetics:
 10p15.2

Domains: PFK

**Protein Families:** Druggable Genome

## PFKP (NM\_002627) Human Tagged ORF Clone Lentiviral Particle - RC200673L4V

**Protein Pathways:** Fructose and mannose metabolism, Galactose metabolism, Glycolysis / Gluconeogenesis,

Metabolic pathways, Pentose phosphate pathway

**MW:** 85.6 kDa

**Gene Summary:** This gene encodes a member of the phosphofructokinase A protein family. The encoded

enzyme is the platelet-specific isoform of phosphofructokinase and plays a key role in

glycolysis regulation. This gene may play a role in metabolic reprogramming in some cancers,

including clear cell renal cell carcinomas, and cancer of the bladder, breast, and lung. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Sep 2016]
