| OTI Disclaimer:              | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u> |
| OTI Annotation:              | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.  |

| Gene Summary: | This gene encodes a member of the vitamin B12-binding protein family. This family of<br>proteins, alternatively referred to as R binders, is expressed in various tissues and secretions.<br>This plasma protein binds cobalamin and mediates the transport of cobalamin into cells. This<br>protein and other mammalian cobalamin-binding proteins, such as transcobalamin I and<br>gastric intrisic factor, may have evolved by duplication of a common ancestral gene.<br>Alternative splicing results in multiple transcript variants.[provided by RefSeq, May 2010] |
