ORIGENE U2AF35 (U2AF1) (NM_006758) Human Tagged ORF Clone Lentiviral Particle – RC200683L3V	
Protein Pathways:	Spliceosome
MW:	27.9 kDa
Gene Summary:	This gene belongs to the splicing factor SR family of genes. U2 auxiliary factor, comprising a large and a small subunit, is a non-snRNP protein required for the binding of U2 snRNP to the pre-mRNA branch site. This gene encodes the small subunit which plays a critical role in both constitutive and enhancer-dependent RNA splicing by directly mediating interactions between the large subunit and proteins bound to the enhancers. Alternatively spliced transcript variants encoding different isoforms have been identified. [provided by RefSeq, Jul 2008]
