## Myosin (MYL6) (NM\_021019) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

Product Name: Myosin (MYL6) (NM 021019) Human Tagged ORF Clone Lentiviral Particle

Symbol: MYL6

Synonyms: ESMLC; LC17; LC17-GI; LC17-NM; LC17A; LC17B; MLC-3; MLC1SM; MLC3SM

Mammalian Cell

Selection:

Puromycin

**Vector:** pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

**ACCN:** NM\_021019

ORF Size: 453 bp

**ORF Nucleotide** 

Sequence:

The ORF insert of this clone is exactly the same as(RC200708).

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through

naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 021019.2

 RefSeq Size:
 827 bp

 RefSeq ORF:
 456 bp

 Locus ID:
 4637

 UniProt ID:
 P60660

 Cytogenetics:
 12q13.2

**Domains:** EFh

**Protein Families:** Druggable Genome

## Myosin (MYL6) (NM\_021019) Human Tagged ORF Clone Lentiviral Particle - RC200708L4V

**Protein Pathways:** Vascular smooth muscle contraction

**MW:** 16.9 kDa

**Gene Summary:** Myosin is a hexameric ATPase cellular motor protein. It is composed of two heavy chains, two

nonphosphorylatable alkali light chains, and two phosphorylatable regulatory light chains. This gene encodes a myosin alkali light chain that is expressed in smooth muscle and non-muscle tissues. Genomic sequences representing several pseudogenes have been described and two transcript variants encoding different isoforms have been identified for this gene.
