| ORF Size:                    | 1791 bp                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| ORF Nucleotide<br>Sequence:  | The ORF insert of this clone is exactly the same as(RC200728).                                                                                                                                                                                                                                                                                                                                                                            |
| OTI Disclaimer:              | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u> |
| OTI Annotation:              | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.                                                                                                                                                                                                                                                                                                      |
| RefSeq:                      | <u>NM 080548.3</u>                                                                                                                                                                                                                                                                                                                                                                                                                        |

#### 67.7 kDa

MW:

Gene Summary:The protein encoded by this gene is a member of the protein tyrosine phosphatase (PTP)<br/>family. PTPs are known to be signaling molecules that regulate a variety of cellular processes<br/>including cell growth, differentiation, mitotic cycle, and oncogenic transformation. N-terminal<br/>part of this PTP contains two tandem Src homolog (SH2) domains, which act as protein<br/>phospho-tyrosine binding domains, and mediate the interaction of this PTP with its<br/>substrates. This PTP is expressed primarily in hematopoietic cells, and functions as an<br/>important regulator of multiple signaling pathways in hematopoietic cells. This PTP has been<br/>shown to interact with, and dephosphorylate a wide spectrum of phospho-proteins involved<br/>in hematopoietic cell signaling. Multiple alternatively spliced variants of this gene, which<br/>encode distinct isoforms, have been reported. [provided by RefSeq, Jul 2008]
