## TSPAN15 (NM\_012339) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

Product Type: Lentiviral Particles

**Product Name:** TSPAN15 (NM\_012339) Human Tagged ORF Clone Lentiviral Particle

Symbol: TSPAN15

**Synonyms:** 2700063A19Rik; NET-7; NET7; TM4SF15

Mammalian Cell

Selection:

Puromycin

**Vector:** pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

**ACCN:** NM\_012339

ORF Size: 882 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC200767).

Sequence:
OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 012339.3

 RefSeq Size:
 1726 bp

 RefSeq ORF:
 885 bp

 Locus ID:
 23555

 UniProt ID:
 095858

 Cytogenetics:
 10q22.1

**Domains:** transmembrane4

**Protein Families:** Transmembrane

## TSPAN15 (NM\_012339) Human Tagged ORF Clone Lentiviral Particle - RC200767L4V

MW: 33.2 kDa

**Gene Summary:** 

The protein encoded by this gene is a member of the transmembrane 4 superfamily, also known as the tetraspanin family. Most of these members are cell-surface proteins that are characterized by the presence of four hydrophobic domains. The proteins mediate signal transduction events that play a role in the regulation of cell development, activation, growth and motility. The use of alternate polyadenylation sites has been found for this gene. [provided by RefSeq, Jul 2008]
