

Product datasheet for RC200944L4

C9orf142 (PAXX) (NM_183241) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Tag: mGFP

Symbol: PAXX

Synonyms: C9orf142; XLS

Mammalian Cell Puromycin

Selection:

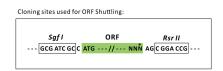

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

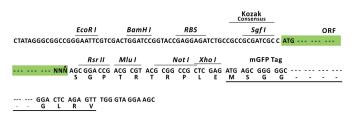

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide Sequence: The ORF insert of this clone is exactly the same as(RC200944).

Restriction Sites: Sgfl-Rsrll

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_183241

ORF Size: 612 bp

C9orf142 (PAXX) (NM_183241) Human Tagged Lenti ORF Clone | RC200944L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

Note: Plasmids are not sterile. For experiments where strict sterility is required, filtration with 0.22um

filter is required.

RefSeq: <u>NM_183241.1</u>

RefSeq Size: 851 bp

RefSeq ORF: 615 bp

Locus ID: 286257

UniProt ID: Q9BUH6

Cytogenetics: 9q34.3

MW: 21.6 kDa

Gene Summary: The protein encoded by this gene plays a role in the nonhomologous end joining (NHEJ)

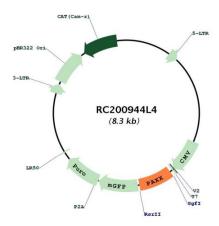

pathway of DNA double-strand break repair. The encoded protein may function to stabilize the

Ku70/Ku80 heterodimer to facilitate the assembly and maintain the stability of the NHEJ

complex. [provided by RefSeq, Jul 2016]
