Gene Summary:The protein encoded by this gene is highly similar to Cdc 37, a cell division cycle control
protein of Sacchromyces cerevisiae. This protein is a molecular chaperone with specific
function in cell signal transduction. It has been shown to form complex with Hsp90 and a
variety of protein kinases including CDK4, CDK6, SRC, RAF-1, MOK, as well as eIF2 alpha
kinases. It is thought to play a critical role in directing Hsp90 to its target kinases. [provided by
