ORIGENE PD	LIM7 (NM_005451) Human Tagged Lenti ORF Clone – RC201005L1
OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Meth	 1. Centrifuge at 5,000xg for 5min. 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. 3. Close the tube and incubate for 10 minutes at room temperature. 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. 5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.

CRIGENE PDLIM7 (NM_005451) Human Tagged Lenti ORF Clone – RC201005L1

Gene Summary:The protein encoded by this gene is representative of a family of proteins composed of
conserved PDZ and LIM domains. LIM domains are proposed to function in protein-protein
recognition in a variety of contexts including gene transcription and development and in
cytoskeletal interaction. The LIM domains of this protein bind to protein kinases, whereas the
PDZ domain binds to actin filaments. The gene product is involved in the assembly of an actin
filament-associated complex essential for transmission of ret/ptc2 mitogenic signaling. The
biological function is likely to be that of an adapter, with the PDZ domain localizing the LIM-
binding proteins to actin filaments of both skeletal muscle and nonmuscle tissues. Alternative
splicing of this gene results in multiple transcript variants. [provided by RefSeq, Jul 2008]
