Cortactin (CTTN) (NM_138565) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Cortactin (CTTN) (NM_138565) Human Tagged Lenti ORF Clone

Tag:Myc-DDKSymbol:CortactinSynonyms:EMS1

Selection:

Vector:pLenti-C-Myc-DDK (PS100064)E. coli Selection:Chloramphenicol (34 ug/mL)

None

ORF Nucleotide

Mammalian Cell

The ORF insert of this clone is exactly the same as(RC201111).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_138565

ORF Size: 1539 bp

Cortactin (CTTN) (NM_138565) Human Tagged Lenti ORF Clone - RC201111L1

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 138565.1</u>

RefSeq Size:3208 bpRefSeq ORF:1542 bpLocus ID:2017

UniProt ID: Q14247

Cytogenetics: 11q13.3

Protein Families: Druggable Genome

Protein Pathways: Pathogenic Escherichia coli infection, Tight junction

MW: 57.5 kDa

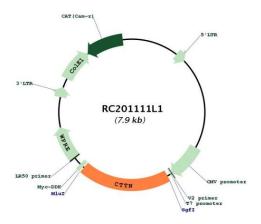

Gene Summary: This gene is overexpressed in breast cancer and squamous cell carcinomas of the head and

neck. The encoded protein is localized in the cytoplasm and in areas of the cell-substratum contacts. This gene has two roles: (1) regulating the interactions between components of adherens-type junctions and (2) organizing the cytoskeleton and cell adhesion structures of epithelia and carcinoma cells. During apoptosis, the encoded protein is degraded in a caspase-dependent manner. The aberrant regulation of this gene contributes to tumor cell invasion and metastasis. Three splice variants that encode different isoforms have been

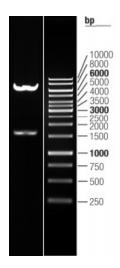

identified for this gene. [provided by RefSeq, May 2010]
