Cip4 (TRIP10) (NM_004240) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Cip4 (TRIP10) (NM_004240) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: Cip4

Synonyms: CIP4; HSTP; STOT; STP; TRIP-10

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC201200).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM_004240

ORF Size: 1635 bp

Cip4 (TRIP10) (NM_004240) Human Tagged Lenti ORF Clone - RC201200L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 004240.2</u>

RefSeq Size: 2033 bp
RefSeq ORF: 1638 bp
Locus ID: 9322

UniProt ID: Q15642
Cytogenetics: 19p13.3

Protein Families: Druggable Genome

Protein Pathways: Insulin signaling pathway

MW: 62.6 kDa

Gene Summary: Required for translocation of GLUT4 to the plasma membrane in response to insulin signaling

(By similarity). Required to coordinate membrane tubulation with reorganization of the actin

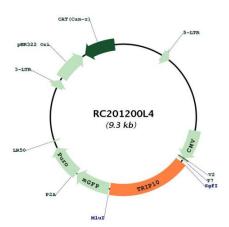

cytoskeleton during endocytosis. Binds to lipids such as phosphatidylinositol 4,5-bisphosphate and phosphatidylserine and promotes membrane invagination and the formation of tubules. Also promotes CDC42-induced actin polymerization by recruiting WASL/N-WASP which in turn activates the Arp2/3 complex. Actin polymerization may promote the fission of membrane tubules to form endocytic vesicles. Required for the formation of podosomes, actin-rich adhesion structures specific to monocyte-derived cells. May be

required for the lysosomal retention of FASLG/FASL.[UniProtKB/Swiss-Prot Function]

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US
