

## Product datasheet for **RC201225L4V**

### **MMP7 (NM\_002423) Human Tagged ORF Clone Lentiviral Particle**

#### **Product data:**

|                           |  |
|---------------------------|--|
| Product Type:             | Lentiviral Particles   |
| Product Name:             | MMP7 (NM_002423) Human Tagged ORF Clone Lentiviral Particle  |
| Symbol:                   | MMP7   |
| Synonyms:                 | MMP-7; MPLS1; PUMP-1   |
| Mammalian Cell Selection: | Puromycin  |
| Vector:                   | pLenti-C-mGFP-P2A-Puro (PS100093)  |
| Tag:                      | mGFP   |
| ACCN:                     | NM_002423  |
| ORF Size:                 | 801 bp   |
| ORF Nucleotide Sequence:  | The ORF insert of this clone is exactly the same as(RC201225).   |
| OTI Disclaimer:           | <p>Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <a href="mailto:custsupport@origene.com">custsupport@origene.com</a> or by calling 301.340.3188 option 3 for pricing and delivery.</p> <p>The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <a href="#">More info</a></p> |
| OTI Annotation:           | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.   |
| RefSeq:                   | <a href="#">NM_002423.2</a>  |
| RefSeq Size:              | 1147 bp  |
| RefSeq ORF:               | 804 bp   |

|--------------------------|---|
| <b>Locus ID:</b>         | 4316  |
| <b>UniProt ID:</b>       | <a href="#">P09237</a>  |
| <b>Cytogenetics:</b>     | 11q22.2   |
| <b>Protein Families:</b> | Druggable Genome, Protease  |
| <b>Protein Pathways:</b> | Wnt signaling pathway   |
| <b>MW:</b>               | 29.7 kDa  |
| <b>Gene Summary:</b>     | <p>This gene encodes a member of the peptidase M10 family of matrix metalloproteinases (MMPs). Proteins in this family are involved in the breakdown of extracellular matrix in normal physiological processes, such as embryonic development, reproduction, and tissue remodeling, as well as in disease processes, such as arthritis and metastasis. The encoded preproprotein is proteolytically processed to generate the mature protease. This secreted protease breaks down proteoglycans, fibronectin, elastin and casein and differs from most MMP family members in that it lacks a conserved C-terminal hemopexin domain. The enzyme is involved in wound healing, and studies in mice suggest that it regulates the activity of defensins in intestinal mucosa. The gene is part of a cluster of MMP genes on chromosome 11. This gene exhibits elevated expression levels in multiple human cancers. [provided by RefSeq, Jan 2016]</p> |
