| | Prohibitin (PHB) (NM_002634) Human Tagged ORF Clone Lentiviral Particle – RC201229L4V |
|---------------|---|
| MW: | 29.6 kDa |
| Gene Summary: | This gene is evolutionarily conserved, and its product is proposed to play a role in human cellular senescence and tumor suppression. Antiproliferative activity is reported to be localized to the 3' UTR, which is proposed to function as a trans-acting regulatory RNA. Several pseudogenes of this gene have been identified. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Jul 2013] |
