## Product datasheet for RC201314L2V

## Bcl x (BCL2L1) (NM\_138578) Human Tagged ORF Clone Lentiviral Particle

## **Product data:**

| Product Type:                | Lentiviral Particles  |
|------------------------------|---|
| Product Name:                | Bcl x (BCL2L1) (NM_138578) Human Tagged ORF Clone Lentiviral Particle   |
| Symbol:                      | Bcl x   |
| Synonyms:                    | Bcl-X; BCL-XL/S; BCL2L; BCLX; PPP1R52   |
| Mammalian Cell<br>Selection: | None  |
| Vector:                      | pLenti-C-mGFP (PS100071)  |
| Tag:                         | mGFP  |
| ACCN:                        | NM_138578   |
| ORF Size:                    | 699 bp  |
| ORF Nucleotide<br>Sequence:  | The ORF insert of this clone is exactly the same as(RC201314).  |
| OTI Disclaimer:              | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u> |
| OTI Annotation:              | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.  |
| RefSeq:                      | <u>NM 138578.1</u>  |
| RefSeq Size:                 | 2575 bp   |
| RefSeq ORF:                  | 702 bp  |
| Locus ID:                    | 598   |
| UniProt ID:                  | <u>Q07817</u>   |
| Cytogenetics:                | 20q11.21  |
| Domains:                     | Bcl-2, BH4  |
| Protein Families:            | Druggable Genome, ES Cell Differentiation/IPS, Transmembrane  |

26 kDa

MW:

Gene Summary: The protein encoded by this gene belongs to the BCL-2 protein family. BCL-2 family members form hetero- or homodimers and act as anti- or pro-apoptotic regulators that are involved in a wide variety of cellular activities. The proteins encoded by this gene are located at the outer mitochondrial membrane, and have been shown to regulate outer mitochondrial membrane channel (VDAC) opening. VDAC regulates mitochondrial membrane potential, and thus controls the production of reactive oxygen species and release of cytochrome C by mitochondria, both of which are the potent inducers of cell apoptosis. Alternative splicing results in multiple transcript variants encoding two different isoforms. The longer isoform acts as an apoptotic inhibitor and the shorter isoform acts as an apoptotic activator. [provided by RefSeq, Dec 2015]
