# Product data:

**Product Type:** Expression Plasmids

Product Name: HMBS (NM\_000190) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: HMBS

Synonyms: PBG-D; PBGD; PORC; UPS

Mammalian Cell None

Selection:

**Vector:** pLenti-C-mGFP (PS100071)

**E. coli Selection:** Chloramphenicol (34 ug/mL)

ORF Nucleotide

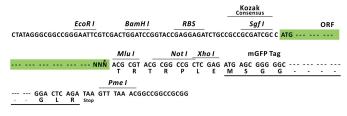

The ORF insert of this clone is exactly the same as(RC201362).

Sequence:

**Restriction Sites:** Sgfl-Mlul

**Cloning Scheme:** 

<sup>\*</sup> The last codon before the Stop codon of the ORF.

**ACCN:** NM\_000190

ORF Size: 1083 bp

### HMBS (NM\_000190) Human Tagged Lenti ORF Clone - RC201362L2

**OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

**RefSeq:** <u>NM 000190.3</u>

 RefSeq Size:
 1526 bp

 RefSeq ORF:
 1086 bp

 Locus ID:
 3145

 UniProt ID:
 P08397

Cytogenetics: 11q23.3

Domains: Porphobil\_deam

Protein Families: Druggable Genome

**Protein Pathways:** Metabolic pathways, Porphyrin and chlorophyll metabolism

MW: 39.3 kDa

**Gene Summary:** This gene encodes a member of the hydroxymethylbilane synthase superfamily. The encoded

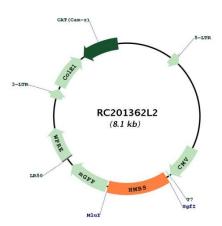

protein is the third enzyme of the heme biosynthetic pathway and catalyzes the head to tail condensation of four porphobilinogen molecules into the linear hydroxymethylbilane. Mutations in this gene are associated with the autosomal dominant disease acute

intermittent porphyria. Alternatively spliced transcript variants encoding different isoforms

have been described. [provided by RefSeq, Jul 2008]
