Product datasheet for RC201551L1V

SPOP (NM_001007229) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type:	Lentiviral Particles
Product Name:	SPOP (NM_001007229) Human Tagged ORF Clone Lentiviral Particle
Symbol:	SPOP
Synonyms:	BTBD32; NEDMACE; NEDMIDF; NSDVS1; NSDVS2; TEF2
Mammalian Cell Selection:	None
Vector:	pLenti-C-Myc-DDK (PS100064)
Tag:	Myc-DDK
ACCN:	NM_001007229
ORF Size:	1122 bp
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC201551).
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
RefSeq:	<u>NM 001007229.1, NP 001007230.1</u>
RefSeq Size:	2982 bp
RefSeq ORF:	1125 bp
Locus ID:	8405
UniProt ID:	<u>043791</u>
Cytogenetics:	17q21.33
MW:	42.1 kDa
RefSeq: RefSeq Size: RefSeq ORF: Locus ID: UniProt ID: Cytogenetics:	 variants is recommended prior to use. <u>More info</u> This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene. <u>NM 001007229.1, NP 001007230.1</u> 2982 bp 1125 bp 8405 <u>O43791</u> 17q21.33

Gene Summary:This gene encodes a protein that may modulate the transcriptional repression activities of
death-associated protein 6 (DAXX), which interacts with histone deacetylase, core histones,
and other histone-associated proteins. In mouse, the encoded protein binds to the putative
leucine zipper domain of macroH2A1.2, a variant H2A histone that is enriched on inactivated
X chromosomes. The BTB/POZ domain of this protein has been shown in other proteins to
mediate transcriptional repression and to interact with components of histone deacetylase
co-repressor complexes. Alternative splicing of this gene results in multiple transcript
variants encoding the same protein. [provided by RefSeq, Jul 2008]
