## SULT1A1 (NM\_001055) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

**Product Name:** SULT1A1 (NM\_001055) Human Tagged ORF Clone Lentiviral Particle

Symbol: SULT1A1

Synonyms: HAST1/HAST2; P-PST; P-PST 1; PST; ST1A1; ST1A3; STP; STP1; ts-PST; TSPST1

**Mammalian Cell** 

Selection:

None

**Vector:** pLenti-C-Myc-DDK (PS100064)

NM 001055

Tag: Myc-DDK

ORF Size: 885 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC201601).

Sequence:

ACCN:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeq:** <u>NM 001055.2</u>

 RefSeq Size:
 1254 bp

 RefSeq ORF:
 888 bp

 Locus ID:
 6817

 UniProt ID:
 P50225

 Cytogenetics:
 16p11.2

**Domains:** Sulfotransfer

**Protein Pathways:** Sulfur metabolism

## SULT1A1 (NM\_001055) Human Tagged ORF Clone Lentiviral Particle - RC201601L1V

**MW:** 34.1 kDa

**Gene Summary:** Sulfotransferase enzymes catalyze the sulfate conjugation of many hormones,

neurotransmitters, drugs, and xenobiotic compounds. These cytosolic enzymes are different in their tissue distributions and substrate specificities. The gene structure (number and length of exons) is similar among family members. This gene encodes one of two phenol sulfotransferases with thermostable enzyme activity. Multiple alternatively spliced variants that encode two isoforms have been identified for this gene. [provided by RefSeq, Jul 2008]
