Gene Summary:Cold-inducible mRNA binding protein that plays a protective role in the genotoxic stress
response by stabilizing transcripts of genes involved in cell survival. Acts as a translational
activator. Seems to play an essential role in cold-induced suppression of cell proliferation.
Binds specifically to the 3'-untranslated regions (3' UTRs) of stress-responsive transcripts
RPA2 and TXN. Acts as a translational repressor (By similarity). Promotes assembly of stress
granules (SGs), when overexpressed.[UniProtKB/Swiss-Prot Function]
