Adrenodoxin (FDX1) (NM_004109) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Adrenodoxin (FDX1) (NM_004109) Human Tagged Lenti ORF Clone

Tag: mGFP

Symbol: Adrenodoxin

Synonyms: ADX; FDX; LOH11CR1D

Mammalian Cell None

Selection:

Vector: pLenti-C-mGFP (PS100071)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC201647).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_004109

ORF Size: 552 bp

Adrenodoxin (FDX1) (NM_004109) Human Tagged Lenti ORF Clone - RC201647L2

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

11q22.3

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 004109.3</u>

RefSeq Size: 3155 bp
RefSeq ORF: 555 bp
Locus ID: 2230

 UniProt ID:
 P10109

Domains: fer2

Cytogenetics:

MW: 19.4 kDa

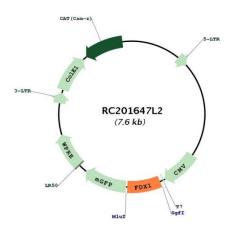

Gene Summary: This gene encodes a small iron-sulfur protein that transfers electrons from NADPH through

ferredoxin reductase to mitochondrial cytochrome P450, involved in steroid, vitamin D, and bile acid metabolism. Pseudogenes of this functional gene are found on chromosomes 20

and 21. [provided by RefSeq, Aug 2011]
