EBP50 (SLC9A3R1) (NM 004252) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: EBP50 (SLC9A3R1) (NM_004252) Human Tagged ORF Clone Lentiviral Particle

Symbol: EBP50

Synonyms: EBP50; NHERF; NHERF-1; NHERF1; NPHLOP2

Mammalian Cell

Selection:

None

Vector: pLenti-C-Myc-DDK (PS100064)

Tag: Myc-DDK
ACCN: NM 004252

ORF Size: 1074 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC201653).

Sequence:
OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: <u>NM 004252.1</u>

 RefSeq Size:
 2032 bp

 RefSeq ORF:
 1077 bp

 Locus ID:
 9368

 UniProt ID:
 014745

Cytogenetics: 17q25.1

Domains: PDZ

Protein Families: Druggable Genome

MW: 38.9 kDa

Gene Summary:

This gene encodes a sodium/hydrogen exchanger regulatory cofactor. The protein interacts with and regulates various proteins including the cystic fibrosis transmembrane conductance regulator and G-protein coupled receptors such as the beta2-adrenergic receptor and the parathyroid hormone 1 receptor. The protein also interacts with proteins that function as linkers between integral membrane and cytoskeletal proteins. The protein localizes to actinrich structures including membrane ruffles, microvilli, and filopodia. Mutations in this gene result in hypophosphatemic nephrolithiasis/osteoporosis type 2, and loss of heterozygosity of this gene is implicated in breast cancer.[provided by RefSeq, Sep 2009]
