

Product datasheet for RC201755L3

CBS (NM_000071) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: CBS (NM 000071) Human Tagged Lenti ORF Clone

Tag: Myc-DDK

Symbol: CBS

Synonyms: CBSL; HIP4

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC201755).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_000071

ORF Size: 1653 bp

OriGene Technologies, Inc. 9620 Medical Center Drive, Ste 200

CBS (NM_000071) Human Tagged Lenti ORF Clone - RC201755L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 000071.1</u>

RefSeq Size: 2609 bp
RefSeq ORF: 1656 bp
Locus ID: 875

UniProt ID: P35520

Cytogenetics: 21q22.3

Domains: CBS, PALP

Protein Families: Druggable Genome

Protein Pathways: Cysteine and methionine metabolism, Glycine, serine and threonine metabolism, Metabolic

pathways, Selenoamino acid metabolism

MW: 60.6 kDa

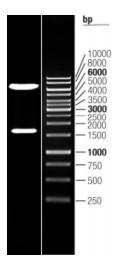

Gene Summary: The protein encoded by this gene acts as a homotetramer to catalyze the conversion of

homocysteine to cystathionine, the first step in the transsulfuration pathway. The encoded protein is allosterically activated by adenosyl-methionine and uses pyridoxal phosphate as a cofactor. Defects in this gene can cause cystathionine beta-synthase deficiency (CBSD), which can lead to homocystinuria. This gene is a major contributor to cellular hydrogen sulfide production. Multiple alternatively spliced transcript variants have been found for this gene.
