Product datasheet for RC201815L1V

BASP1 (NM_006317) Human Tagged ORF Clone Lentiviral Particle

Product data:

| Lentiviral Particles |
|---|
| BASP1 (NM_006317) Human Tagged ORF Clone Lentiviral Particle |
| BASP1 |
| CAP-23; CAP23; NAP-22; NAP22 |
| None |
| pLenti-C-Myc-DDK (PS100064) |
| Myc-DDK |
| NM_006317 |
| 681 bp |
| The ORF insert of this clone is exactly the same as(RC201815). |
| The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u> |
| This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene. |
| <u>NM 006317.3</u> |
| 1820 bp |
| 684 bp |
| 10409 |
| <u>P80723</u> |
| 5p15.1 |
| 22.5 kDa |
| |

Gene Summary:This gene encodes a membrane bound protein with several transient phosphorylation sites
and PEST motifs. Conservation of proteins with PEST sequences among different species
supports their functional significance. PEST sequences typically occur in proteins with high
turnover rates. Immunological characteristics of this protein are species specific. This protein
also undergoes N-terminal myristoylation. Alternative splicing results in multiple transcript
variants that encode the same protein. [provided by RefSeq, Oct 2012]
