# Product datasheet for RC201834L4

### HNRPH1 (HNRNPH1) (NM\_005520) Human Tagged Lenti ORF Clone

# **Product data:**

Product Type:	Expression Plasmids
Product Name:	HNRPH1 (HNRNPH1) (NM_005520) Human Tagged Lenti ORF Clone
Tag:	mGFP
Symbol:	HNRPH1
Synonyms:	hnRNPH; HNRPH; HNRPH1
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-mGFP-P2A-Puro (PS100093)
E. coli Selection:	Chloramphenicol (34 ug/mL)
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC201834).
<b>Restriction Sites:</b>	Sgfl-Mlul
Cloning Scheme:	
	Cloning sites used for ORF Shuttling:
	Sgf1         ORF         Mlu I            GCG ATC GCC         ATG// NNN         ACG CGT

ACCN: ORF Size: NM\_005520 1347 bp

	HNRPH1 (HNRNPH1) (NM_005520) Human Tagged Lenti ORF Clone – RC201834L4
OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Me	<ul> <li>thod: 1. Centrifuge at 5,000xg for 5min.</li> <li>2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>3. Close the tube and incubate for 10 minutes at room temperature.</li> <li>4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ul>
RefSeq:	<u>NM 005520.1</u>
RefSeq Size:	2274 bp
RefSeq ORF:	1350 bp
Locus ID:	3187
UniProt ID:	<u>P31943</u>
Cytogenetics:	5q35.3
Domains:	RRM
MW:	49.2 kDa

### Serigene HNRPH1 (HNRNPH1) (NM\_005520) Human Tagged Lenti ORF Clone – RC201834L4

# Gene Summary:This gene encodes a member of a subfamily of ubiquitously expressed heterogeneous<br/>nuclear ribonucleoproteins (hnRNPs). The hnRNPs are RNA binding proteins that complex<br/>with heterogeneous nuclear RNA. These proteins are associated with pre-mRNAs in the<br/>nucleus and appear to influence pre-mRNA processing and other aspects of mRNA<br/>metabolism and transport. While all of the hnRNPs are present in the nucleus, some may<br/>shuttle between the nucleus and the cytoplasm. The hnRNP proteins have distinct nucleic<br/>acid binding properties. The protein encoded by this gene has three repeats of quasi-RRM<br/>domains that bind to RNA and is very similar to the family member HNRPF. This gene may be<br/>associated with hereditary lymphedema type I. Alternatively spliced transcript variants have<br/>been described [provided by RefSeq, Mar 2012]
