| Protein Pathway | s: Metabolic pathways, N-Glycan biosynthesis |
| MW: | 80.5 kDa |
| Gene Summary: | The protein encoded by this gene is a catalytic subunit of the N-oligosaccharyltransferase (OST) complex, which functions in the endoplasmic reticulum to transfer glycan chains to asparagine residues of target proteins. A separate complex containing a similar catalytic subunit with an overlapping function also exists. Multiple transcript variants encoding different isoforms have been found for this gene.
