	<b>CRIGENE</b> ETS1 associated protein II (TDP2) (NM_016614) Human Tagged ORF Clone Lentiviral Particle – RC202015L3V	
MW:	40.9 kDa	
Gene Summary:	This gene encodes a member of a superfamily of divalent cation-dependent phosphodiesterases. The encoded protein associates with CD40, tumor necrosis factor (TNF) receptor-75 and TNF receptor associated factors (TRAFs), and inhibits nuclear factor-kappa-B activation. This protein has sequence and structural similarities with APE1 endonuclease, which is involved in both DNA repair and the activation of transcription factors. [provided by RefSeq, Jul 2008]
