

Product datasheet for RC202074L3

PAM (NM_138821) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: PAM (NM_138821) Human Tagged Lenti ORF Clone

Tag: Myc-DDK

Symbol: PAM

Synonyms: PAL; PHM

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC202074).

Sequence:

Sgfl-Mlul

Restriction Sites: Cloning Scheme:

st The last codon before the Stop codon of the ORF.

ACCN: NM_138821

ORF Size: 2598 bp

OriGene Technologies, Inc. 9620 Medical Center Drive, Ste 200

PAM (NM_138821) Human Tagged Lenti ORF Clone - RC202074L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 138821.1</u>

 RefSeq Size:
 5035 bp

 RefSeq ORF:
 2601 bp

 Locus ID:
 5066

 UniProt ID:
 P19021

Cytogenetics: 5q21.1

Protein Families: Druggable Genome, Transmembrane

MW: 96.3 kDa

Gene Summary: This gene encodes a multifunctional protein. The encoded preproprotein is proteolytically

processed to generate the mature enzyme. This enzyme includes two domains with distinct catalytic activities, a peptidylglycine alpha-hydroxylating monooxygenase (PHM) domain and a peptidyl-alpha-hydroxyglycine alpha-amidating lyase (PAL) domain. These catalytic domains work sequentially to catalyze the conversion of neuroendocrine peptides to active alpha-amidated products. Alternative splicing results in multiple transcript variants, at least one of which encodes an isoform that is proteolytically processed. [provided by RefSeq, Jan 2016]
