GJB2 (NM_004004) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: GJB2 (NM_004004) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: GJB2

Synonyms: BAPS; CX26; DFNA3; DFNA3A; DFNB1; DFNB1A; HID; KID; NSRD1; PPK

Mammalian Cell None

Selection:

Vector:pLenti-C-mGFP (PS100071)E. coli Selection:Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC202092).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_004004

ORF Size: 678 bp

GJB2 (NM_004004) Human Tagged Lenti ORF Clone - RC202092L2

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 004004.3</u>

 RefSeq Size:
 2347 bp

 RefSeq ORF:
 681 bp

 Locus ID:
 2706

 UniProt ID:
 P29033

Cytogenetics: 13q12.11

Protein Families: Druggable Genome, Ion Channels: Other, Transmembrane

MW: 26.2 kDa

Gene Summary: This gene encodes a member of the gap junction protein family. The gap junctions were first

characterized by electron microscopy as regionally specialized structures on plasma membranes of contacting adherent cells. These structures were shown to consist of cell-to-cell channels that facilitate the transfer of ions and small molecules between cells. The gap junction proteins, also known as connexins, purified from fractions of enriched gap junctions from different tissues differ. According to sequence similarities at the nucleotide and amino

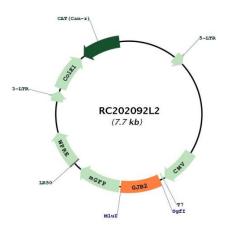

acid levels, the gap junction proteins are divided into two categories, alpha and beta.

Mutations in this gene are responsible for as much as 50% of pre-lingual, recessive deafness.
