Selenium Binding Protein 1 (SELENBP1) (NM 003944) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Selenium Binding Protein 1 (SELENBP1) (NM 003944) Human Tagged Lenti ORF Clone

Tag: Myc-DDK

Symbol: Selenium Binding Protein 1

Synonyms: EHMTO; HEL-S-134P; hSBP; LPSB; MTO; SBP56; SP56

Mammalian Cell

Selection:

Puromycin

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

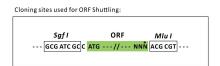

ORF Nucleotide

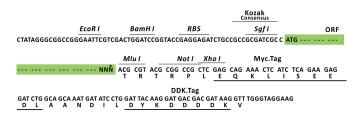

The ORF insert of this clone is exactly the same as(RC202108).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_003944

ORF Size: 1416 bp

Selenium Binding Protein 1 (SELENBP1) (NM_003944) Human Tagged Lenti ORF Clone – RC202108L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 003944.2</u>

RefSeq Size:1768 bpRefSeq ORF:1419 bp

Locus ID: 8991

UniProt ID: Q13228
Cytogenetics: 1q21.3

MW: 52.4 kDa

Gene Summary: This gene encodes a member of the selenium-binding protein family. Selenium is an essential

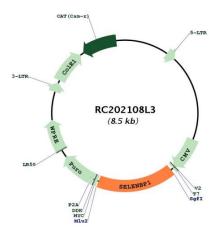

nutrient that exhibits potent anticarcinogenic properties, and deficiency of selenium may cause certain neurologic diseases. The effects of selenium in preventing cancer and neurologic diseases may be mediated by selenium-binding proteins, and decreased

expression of this gene may be associated with several types of cancer. The encoded protein may play a selenium-dependent role in ubiquitination/deubiquitination-mediated protein degradation. Alternatively spliced transcript variants encoding multiple isoforms have been

observed for this gene. [provided by RefSeq, Apr 2012]
