## DR4 (TNFRSF10A) (NM\_003844) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

**Product Name:** DR4 (TNFRSF10A) (NM\_003844) Human Tagged ORF Clone Lentiviral Particle

Symbol: DR4

**Synonyms:** APO2; CD261; DR4; TRAILR-1; TRAILR1

Mammalian Cell

Selection:

None

**Vector:** pLenti-C-Myc-DDK (PS100064)

Tag: Myc-DDK
ACCN: NM 003844

ORF Size: 1404 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC202152).

Sequence:

Cytogenetics:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through

naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 003844.2, NP 003835.2

 RefSeq Size:
 1764 bp

 RefSeq ORF:
 1407 bp

 Locus ID:
 8797

 UniProt ID:
 000220

Domains: DEATH, TNFR

**Protein Families:** Druggable Genome, Transmembrane

8p21.3

## DR4 (TNFRSF10A) (NM\_003844) Human Tagged ORF Clone Lentiviral Particle - RC202152L1V

**Protein Pathways:** Apoptosis, Cytokine-cytokine receptor interaction, Natural killer cell mediated cytotoxicity

**MW:** 50.1 kDa

**Gene Summary:** The protein encoded by this gene is a member of the TNF-receptor superfamily. This receptor

is activated by tumor necrosis factor-related apoptosis inducing ligand (TNFSF10/TRAIL), and thus transduces cell death signal and induces cell apoptosis. Studies with FADD-deficient mice

suggested that FADD, a death domain containing adaptor protein, is required for the

apoptosis mediated by this protein. [provided by RefSeq, Jul 2008]
