<b>GRIGENE</b> MYD88 (NM_002468) Human Tagged ORF Clone Lentiviral Particle – RC202253L3V	
Protein Pathways:	Apoptosis, Toll-like receptor signaling pathway
MW:	33.2 kDa
Gene Summary:	This gene encodes a cytosolic adapter protein that plays a central role in the innate and adaptive immune response. This protein functions as an essential signal transducer in the interleukin-1 and Toll-like receptor signaling pathways. These pathways regulate that activation of numerous proinflammatory genes. The encoded protein consists of an N-terminal death domain and a C-terminal Toll-interleukin1 receptor domain. Patients with defects in this gene have an increased susceptibility to pyogenic bacterial infections. Alternate splicing results in multiple transcript variants. [provided by RefSeq, Feb 2010]
