## TMPRSS4 (NM\_183247) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

Product Type: Lentiviral Particles

**Product Name:** TMPRSS4 (NM\_183247) Human Tagged ORF Clone Lentiviral Particle

Symbol: TMPRSS4

Synonyms: membrane-type serine protease 2; MT-SP2; MT-SP2, TMPRSS3; TMPRSS3; transmembrane

protease, serine 4; transmembrane serine protease 3; type II membrane serine protease

Mammalian Cell

Selection:

None

**Vector:** pLenti-C-Myc-DDK (PS100064)

 Tag:
 Myc-DDK

 ACCN:
 NM\_183247

 ORF Size:
 1005 bp

\_\_\_\_.

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC202384).

OTI Disclaimer:

Sequence:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: <u>NM 183247.1</u>, <u>NP 899070.1</u>

RefSeq Size: 1983 bp
RefSeq ORF: 1007 bp
Locus ID: 56649
Cytogenetics: 11q23.3

**Protein Families:** Druggable Genome, Protease, Transmembrane

MW: 37.2 kDa

## **Gene Summary:**

This gene encodes a member of the serine protease family. Serine proteases are known to be involved in a variety of biological processes, whose malfunction often leads to human diseases and disorders. This gene was identified as a gene overexpressed in pancreatic carcinoma. The encoded protein is membrane bound with a N-terminal anchor sequence and a glycosylated extracellular region containing the serine protease domain. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Jul 2008]
