	CTP synthase (CTPS1) (NM_001905) Human Tagged ORF Clone Lentiviral Particle – RC202434L2V
MW:	66.7 kDa
Gene Summary:	This gene encodes an enzyme responsible for the catalytic conversion of UTP (uridine triphosphate) to CTP (cytidine triphospate). This reaction is an important step in the biosynthesis of phospholipids and nucleic acids. Activity of this proten is important in the immune system, and loss of function of this gene has been associated with immunodeficiency. Alternative splicing results in multiple transcript variants.
