

# Product datasheet for RC202511L4

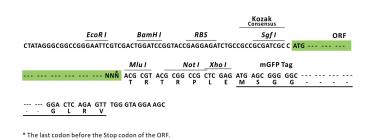

## COX5B (NM\_001862) Human Tagged Lenti ORF Clone

### **Product data:**

#### OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

Product Type:	Expression Plasmids
Product Name:	COX5B (NM_001862) Human Tagged Lenti ORF Clone
Tag:	mGFP
Symbol:	COX5B
Synonyms:	COXVB
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-mGFP-P2A-Puro (PS100093)
E. coli Selection:	Chloramphenicol (34 ug/mL)
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC202511).
<b>Restriction Sites:</b>	Sgfl-Mlul
Cloning Scheme:	
	Cloning sites used for ORF Shuttling:           Sgf 1         ORF         Miu I
	GCG ATC GCC ATG // NNN ACG CGT

ACCN: ORF Size: NM\_001862 387 bp

<b>COX5B (NM_001862) Human Tagged Lenti ORF Clone – RC202511L4</b>	
OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Metho	<ul> <li>1. Centrifuge at 5,000xg for 5min.</li> <li>2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>3. Close the tube and incubate for 10 minutes at room temperature.</li> <li>4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ul>
RefSeq:	<u>NM 001862.2</u>
RefSeq Size:	523 bp
RefSeq ORF:	390 bp
Locus ID:	1329
UniProt ID:	<u>P10606</u>
Cytogenetics:	2q11.2
Domains:	COX5B
Protein Pathways:	Alzheimer's disease, Cardiac muscle contraction, Huntington's disease, Metabolic pathways, Oxidative phosphorylation, Parkinson's disease
MW:	13.7 kDa

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

### **GRIGENE** COX5B (NM\_001862) Human Tagged Lenti ORF Clone – RC202511L4

Gene Summary:Cytochrome C oxidase (COX) is the terminal enzyme of the mitochondrial respiratory chain. It<br/>is a multi-subunit enzyme complex that couples the transfer of electrons from cytochrome c<br/>to molecular oxygen and contributes to a proton electrochemical gradient across the inner<br/>mitochondrial membrane. The complex consists of 13 mitochondrial- and nuclear-encoded<br/>subunits. The mitochondrially-encoded subunits perform the electron transfer and proton<br/>pumping activities. The functions of the nuclear-encoded subunits are unknown but they may<br/>play a role in the regulation and assembly of the complex. This gene encodes the nuclear-<br/>encoded subunit Vb of the human mitochondrial respiratory chain enzyme. [provided by<br/>RefSeq, Jul 2008]
