

Product datasheet for **RC202520L3V**

MRPL49 (NM_004927) Human Tagged ORF Clone Lentiviral Particle

Product data:

| | |
|---------------------------|--|
| Product Type: | Lentiviral Particles |
| Product Name: | MRPL49 (NM_004927) Human Tagged ORF Clone Lentiviral Particle |
| Symbol: | MRPL49 |
| Synonyms: | C11orf4; L49mt; MRP-L49; NOF; NOF1 |
| Mammalian Cell Selection: | Puromycin |
| Vector: | pLenti-C-Myc-DDK-P2A-Puro (PS100092) |
| Tag: | Myc-DDK |
| ACCN: | NM_004927 |
| ORF Size: | 498 bp |
| ORF Nucleotide Sequence: | The ORF insert of this clone is exactly the same as(RC202520). |
| OTI Disclaimer: | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info |
| OTI Annotation: | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene. |
| RefSeq: | NM_004927.2 |
| RefSeq Size: | 2119 bp |
| RefSeq ORF: | 501 bp |
| Locus ID: | 740 |
| UniProt ID: | Q13405 |
| Cytogenetics: | 11q13.1 |
| Domains: | Img2 |
| MW: | 19.2 kDa |

Gene Summary:

Mammalian mitochondrial ribosomal proteins are encoded by nuclear genes and help in protein synthesis within the mitochondrion. Mitochondrial ribosomes (mitoribosomes) consist of a small 28S subunit and a large 39S subunit. They have an estimated 75% protein to rRNA composition compared to prokaryotic ribosomes, where this ratio is reversed. Another difference between mammalian mitoribosomes and prokaryotic ribosomes is that the latter contain a 5S rRNA. Among different species, the proteins comprising the mitoribosome differ greatly in sequence, and sometimes in biochemical properties, which prevents easy recognition by sequence homology. Pseudogenes corresponding to this gene are found on chromosomes 5q and 8p. [provided by RefSeq, May 2011]
